Cow Cleaning Machine Swinging & Rotating Cow Brush

The special arrangement of the HAPPYCOW Swing brushes in a vertical, swinging direction makes cleaning the coat easier from head to tail.

The brush rotates in every direction and nearly every angle, so each part of the animal's body (head, torso) can be reached.

It can be fastened on both sides ensuring even use of the brushes. Furthermore, there is no risk of jumping up as with horizontal brushes!

The HAPPYCOW Swing is automatically activated for approx. 60 seconds by slightly lifting the brush by the animal. The changing direction of the brush after every activation ensures even wear of the brushes.

The torque safety shutdown stops the brush when it encounters too much resistance, ensuring safety in the stable.

- sturdy motor/powertrain for maximum loads
- transparent cover to the control box for quick identification of the operational status on the display

**Technical data Voltage: 230 V, 50/60 Hz Consumption: 0,55 kW
Speed: 50 rpm / 50 U/min. Weight: 93 kg**

Dimensions: H 198 x W 50 x D 135 cm Protection class: IP 55 Bristle material: Polypropylene (PP)
