

Save up
to 80 % of
energy costs!

GEA Farm Technologies

VoD - EnergySaver

... a brilliantly simple way
to save money and the environment

GEA Farm Technologies – The right choice.

The VoD-EnergySaver: A brilliantly simple way to save your money – and the environment!

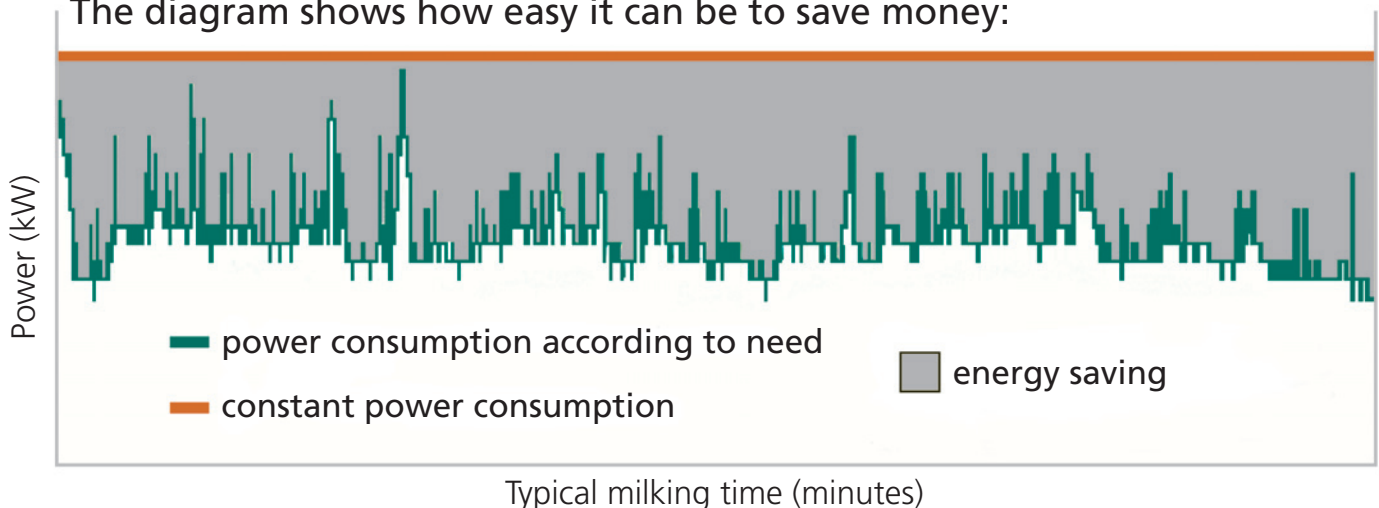

Be smart and lower your daily operating costs!

Help yourself and the environment: react to changing vacuum demand with the new VoD EnergySaver and achieve 80% energy savings.

With the new VoD EnergySaver you only generate as much vacuum as you actually need. Brilliantly simple, it does this with a frequency controller fitted to the vacuum pump motor. It samples the vacuum level and regulates the speed of your vacuum pump, thus saving energy. You only pay for the vacuum that you actually need for milking. Thanks to the smart controller in the VoD EnergySaver, the amount of vacuum produced is exactly the amount needed to regulate the vacuum level perfectly. And all of this with the pleasing side effect of less noise.

The diagram shows how easy it can be to save money:
